# NAD<sup>+</sup>

---

## What is NAD<sup>+</sup>?

NAD<sup>+</sup> (Nicotinamide Adenine Dinucleotide) is a vital coenzyme found in every cell of your body, playing a crucial role in energy production, metabolism, and DNA repair. As we age, NAD<sup>+</sup> levels naturally decline, leading to fatigue, cognitive decline, and slower recovery.

---

## Benefits of NAD<sup>+</sup> Infusions

**Boosts Energy** Restores vitality by supporting cellular energy production.

**Enhance mental clarity** Improves focus, cognitive function, and brain health.

**Anti-aging** Promotes healthier skin, combats signs of aging, and enhances overall wellness.

**Mood** Balances neurotransmitters, helping to reduce stress and promote emotional well-being.

---

## Recommendation

To Optimise the benefits of NAD<sup>+</sup> therapy, we recommend a treatment cycle of 3 infusions over 3 weeks. This way, you can gradually build up your NAD<sup>+</sup> levels to allow your body to absorb, repair, and regenerate more effectively.

Maintaining elevated NAD<sup>+</sup> levels ensures longer-lasting and noticeable improvements, rather than a short-term burst.

Maintenance infusions thereafter can be discussed. Consult with your nurse to customise a treatment plan that works for you!

# IV ADD-ONS

Price

---

## Vitamin C

Vitamin C aids the absorption of other essential nutrients and assists many biological functions, including the growth and repair of all body tissues. Support protective cellular defences, aid collagen and elastin formation and more.

**\$50**

---

## Antioxidants (Glutathione)

Glutathione is a super antioxidant made in the body's cells. Replenishing depleted glutathione levels aims to reduce oxidative stress, improve skin health, detox at the cellular level, fight against autoimmune diseases, improve sleep and support healthy gut function.

**\$50**

---

## B Complex

Fundamental to many cellular functions, the B Complex infusion supports physiological and neurological functioning. It may reduce fatigue, increase energy levels and improve mental acuity

**\$39**

---

## Zinc

Boosting immune system Improving skin health, promoting wound healing

**\$39**

---

## Taurine

Improving athletic performance, reducing stress, providing anti inflammatory benefits Increasing energy

**\$39**

---

## Magnesium

Magnesium relieves muscle cramps, improves sleep, reducing migraines/headaches

**\$29**

---

## Selenium

Improving thyroid function Supporting immune system Supporting fertility

**\$29**

---

## BCAA

Decrease the rate of muscle breakdown, enhance muscle performance

**\$29**

---

## NAD<sup>++</sup>

The NAD<sup>++</sup> booster shot is formulated with the super molecule NAD<sup>+</sup>, B Vitamins and Amino Acids. This booster may support physiological functions including gut, heart, brain and eye health

**\$100**

# BOOSTERS

## B12

Boost energy, mood & improve sleep quality with the B12 shot. B12 supports cognitive function and overall brain health  
Contains Methylcobalamin (B12)

**\$29**

## BCAA\*

Decrease the rate of muscle breakdown, enhance muscle performance  
Contains Leucine, Isoleucine & Valine

**\$29**

## Glow\*

Help to brighten, hydrate and plump skin  
Contains Vitamin B3, B5, Glycine, Lysine, Proline

**\$29**

## Brain Function\*

Supports cognitive function, improves brains performance  
Contains Taurine, Acetyl-L-Carnitine

**\$29**

## Tri- Shot\*

Blend of non-essential amino acids which cannot be made by the body if ill or the immune system is under stress. Supports cardiovascular health, urea cycle processes & immune & digestive function  
Contains Arginine, Citrulline, Ornithine

**\$29**

## Tranquility\*

Formulated to calm nerves, reduce stress & relax muscle  
Contains Magnesium, GABA, Serine and Taurine

**\$39**

## Athlete\*

Increase human growth hormone levels, improves endurance & stamina, decreases recovery time  
Contains Arginine, Ornithine, Glutamine and Lysine

**\$39**

### Mega D

The Vitamin D Mega Shot (600,000 IU) can only be administered once in a 12 month period. You must organise a blood test to check your Vitamin D levels before proceeding with an appointment. Contact Thrive Wellness Co for further information regarding our protocol on Vitamin D.

**\$120**

---

### Ultra C

High-dose Vitamin C infusions above 20g require screening for the G6PD Gene Mutation prior to treatment.

From  
**\$299**

Cancer patients receiving active treatment must supply written consent from their oncologist outlining recommended dosage & frequency. Doses greater than 45g will also require a script before proceeding with an appointment. All referral letters must be addressed to [hello@thrivewellnessco.com.au](mailto:hello@thrivewellnessco.com.au).

Contact Thrive Wellness Co for further information regarding our protocol on High-dose Vitamin C

---

### Iron

Iron infusions can be performed in-clinic for clients who have received a minimum of two iron infusions in the past with no adverse reactions. Clients will need to organise a blood test & script for **Ferinject ONLY** from their GP. The script is to be filled & brought along to your appointment to be administered by your registered nurse.

**\$199**

---

### Pregnancy & Breastfeeding

Any client who is undergoing IV vitamin therapy while pregnant must have prior consent from their obstetrician. **We do not require this for the Quench infusion (hydration only).**

Breastfeeding clients must express feed for 24-48 hours post-vitamin infusion unless prior consent from their obstetrician is provided.

---

### Minors

Anyone from the age of 16- 18 must have consent from their parent or guardian. Clients under the age of 16 will require medical consent from their GP.
